

Information directly
on your phone

Read now and
follow the instructions

A shrill audio
signal is heard

Information directly on your phone when something serious happens.

Starting now, you will receive the warning alarm SE-Alert on your phone when something serious happens. Everyone with an updated smartphone can receive this message. No app or registration needed – it works automatically. When you get a message, read it immediately and follow the instructions. If you don't have a smartphone, you will receive information via other VMA channels, such as radio, TV, apps, web, text messages and the outdoor alarm signal "Hesa Fredrik" – just like normal. For everyone's safety and security.
